

FILIP SALOMONSSON

GAME PROGRAMMER

PROFILE

Hi! My name is Filip, and I am originally from Borås, Sweden, but I am more than willing to relocate for the right opportunity.

I am a graduated Game Programmer from Yrgo, with hands-on experience developing games and interactive experiences in both Unity and Unreal Engine. My experience ranges from mobile applications and PC games to VR experiences.

What I am most passionate about is creating immersive game worlds that feel alive and unique. Level design and environment building are where I feel most creative, and I particularly enjoy the detail-oriented process of creating atmospheric environments. I also enjoy refining and optimizing gameplay to create smooth, satisfying experiences where every element feels right.

With my education, fresh perspective, and strong willingness to learn, I am ready to contribute to a passionate development team. When I become interested in something, I put all my time and energy into learning and improving. I am now looking for an opportunity to grow within the game development industry and take on new challenges.

Please feel free to take a look at my portfolio below.

TECHNICAL SKILLS

- Unity & C#
- Unreal Engine & Blueprints
- VR Development & Performance Optimization
- Gameplay Programming
- UI/UX Development
- Git
- Visual Studio
- Agile Team Development
- Level Design & Environment Building
- Driving Licence: Category B
